## *The rediscovery of the placenta as a remedy*

Many physicians – and not only naturopathic ones – welcome naturopathy for offering the patient the opportunity to "take care of health care and health" on his own initiative. In doing so, it promotes the oftenswearing-in "mature patient".

Naturopathy is by no means in direct contrast to purely scientifically oriented "school medicine". On the contrary, there are many points of

contact that cause both directions to complement each other for the benefit of the patient.

From experience know on-closed doctors:  
Naturopathic procedures have proven themselves, are generally cost-effective and, unless other necessary measures are missed, are virtually risk-free.

## *During the duration of pregnancy, the placenta is responsible for the care and protection of the baby*

With the birth, Placenta has fulfilled its task. But is it also useless or can the properties of the placenta be "preserved" and made usable even after birth?

## *Your own placenta as a homeopathic remedy*

A homeopathic medicine can already be produced from a small piece of your own placenta - a placenta auto nosode. "Auto" comes from the Greek and means "self" and is used here because the starting material for the homeopathic remedy comes from the patient himself. "Nosode" means homeopathic agents which are produced from human or animal starting materials- here from the tissue of the placenta. With the placenta auto nosode you have an individual homeopathic remedy at your disposal.

## *Ordering a placenta auto-nosode*

In order to be able to produce a homeopathic remedy from the placenta, it is important that the quality of the placenta is not changed. It is optimal to have a sample shipping vessel sent to you in good time before birth. The solution contained therein contains only ingredients, which are also used in other for the preparation of homeopathic preparations and protects the placental tissue until the preparation of the homeopathic remedy.

**The applications are diverse:** D6 - improvement of the nutritional quality of milk, D8 - baby's colds, painful menstrual bleeding, D12 / D20 - menstrual problems, D30 - "stress milk", D30 - baby stress prophylaxis (e.g. baptism, family celebration), if D8 with a cold not enough for adults with a cold.
